

LithTM

Our Lithium Advantage

LITHIUM SALTS AMERICA

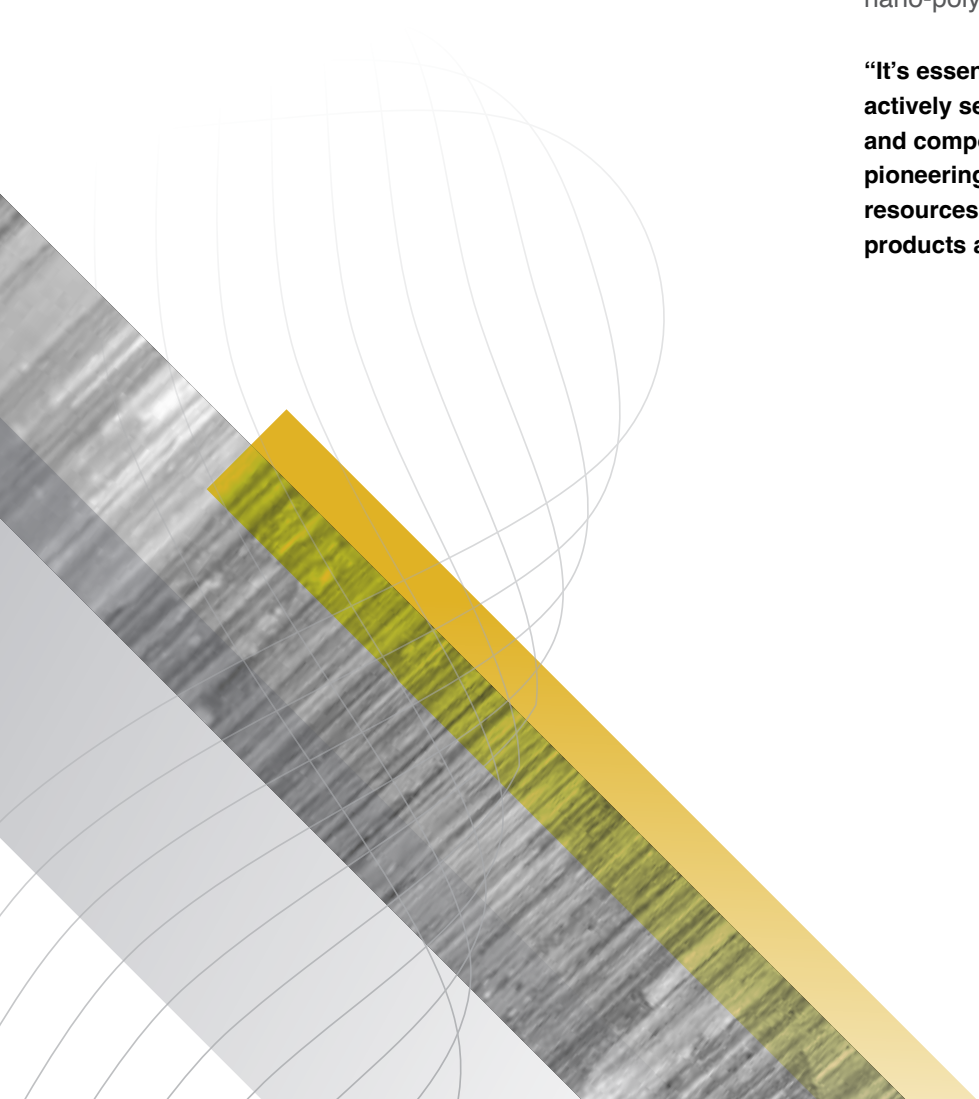

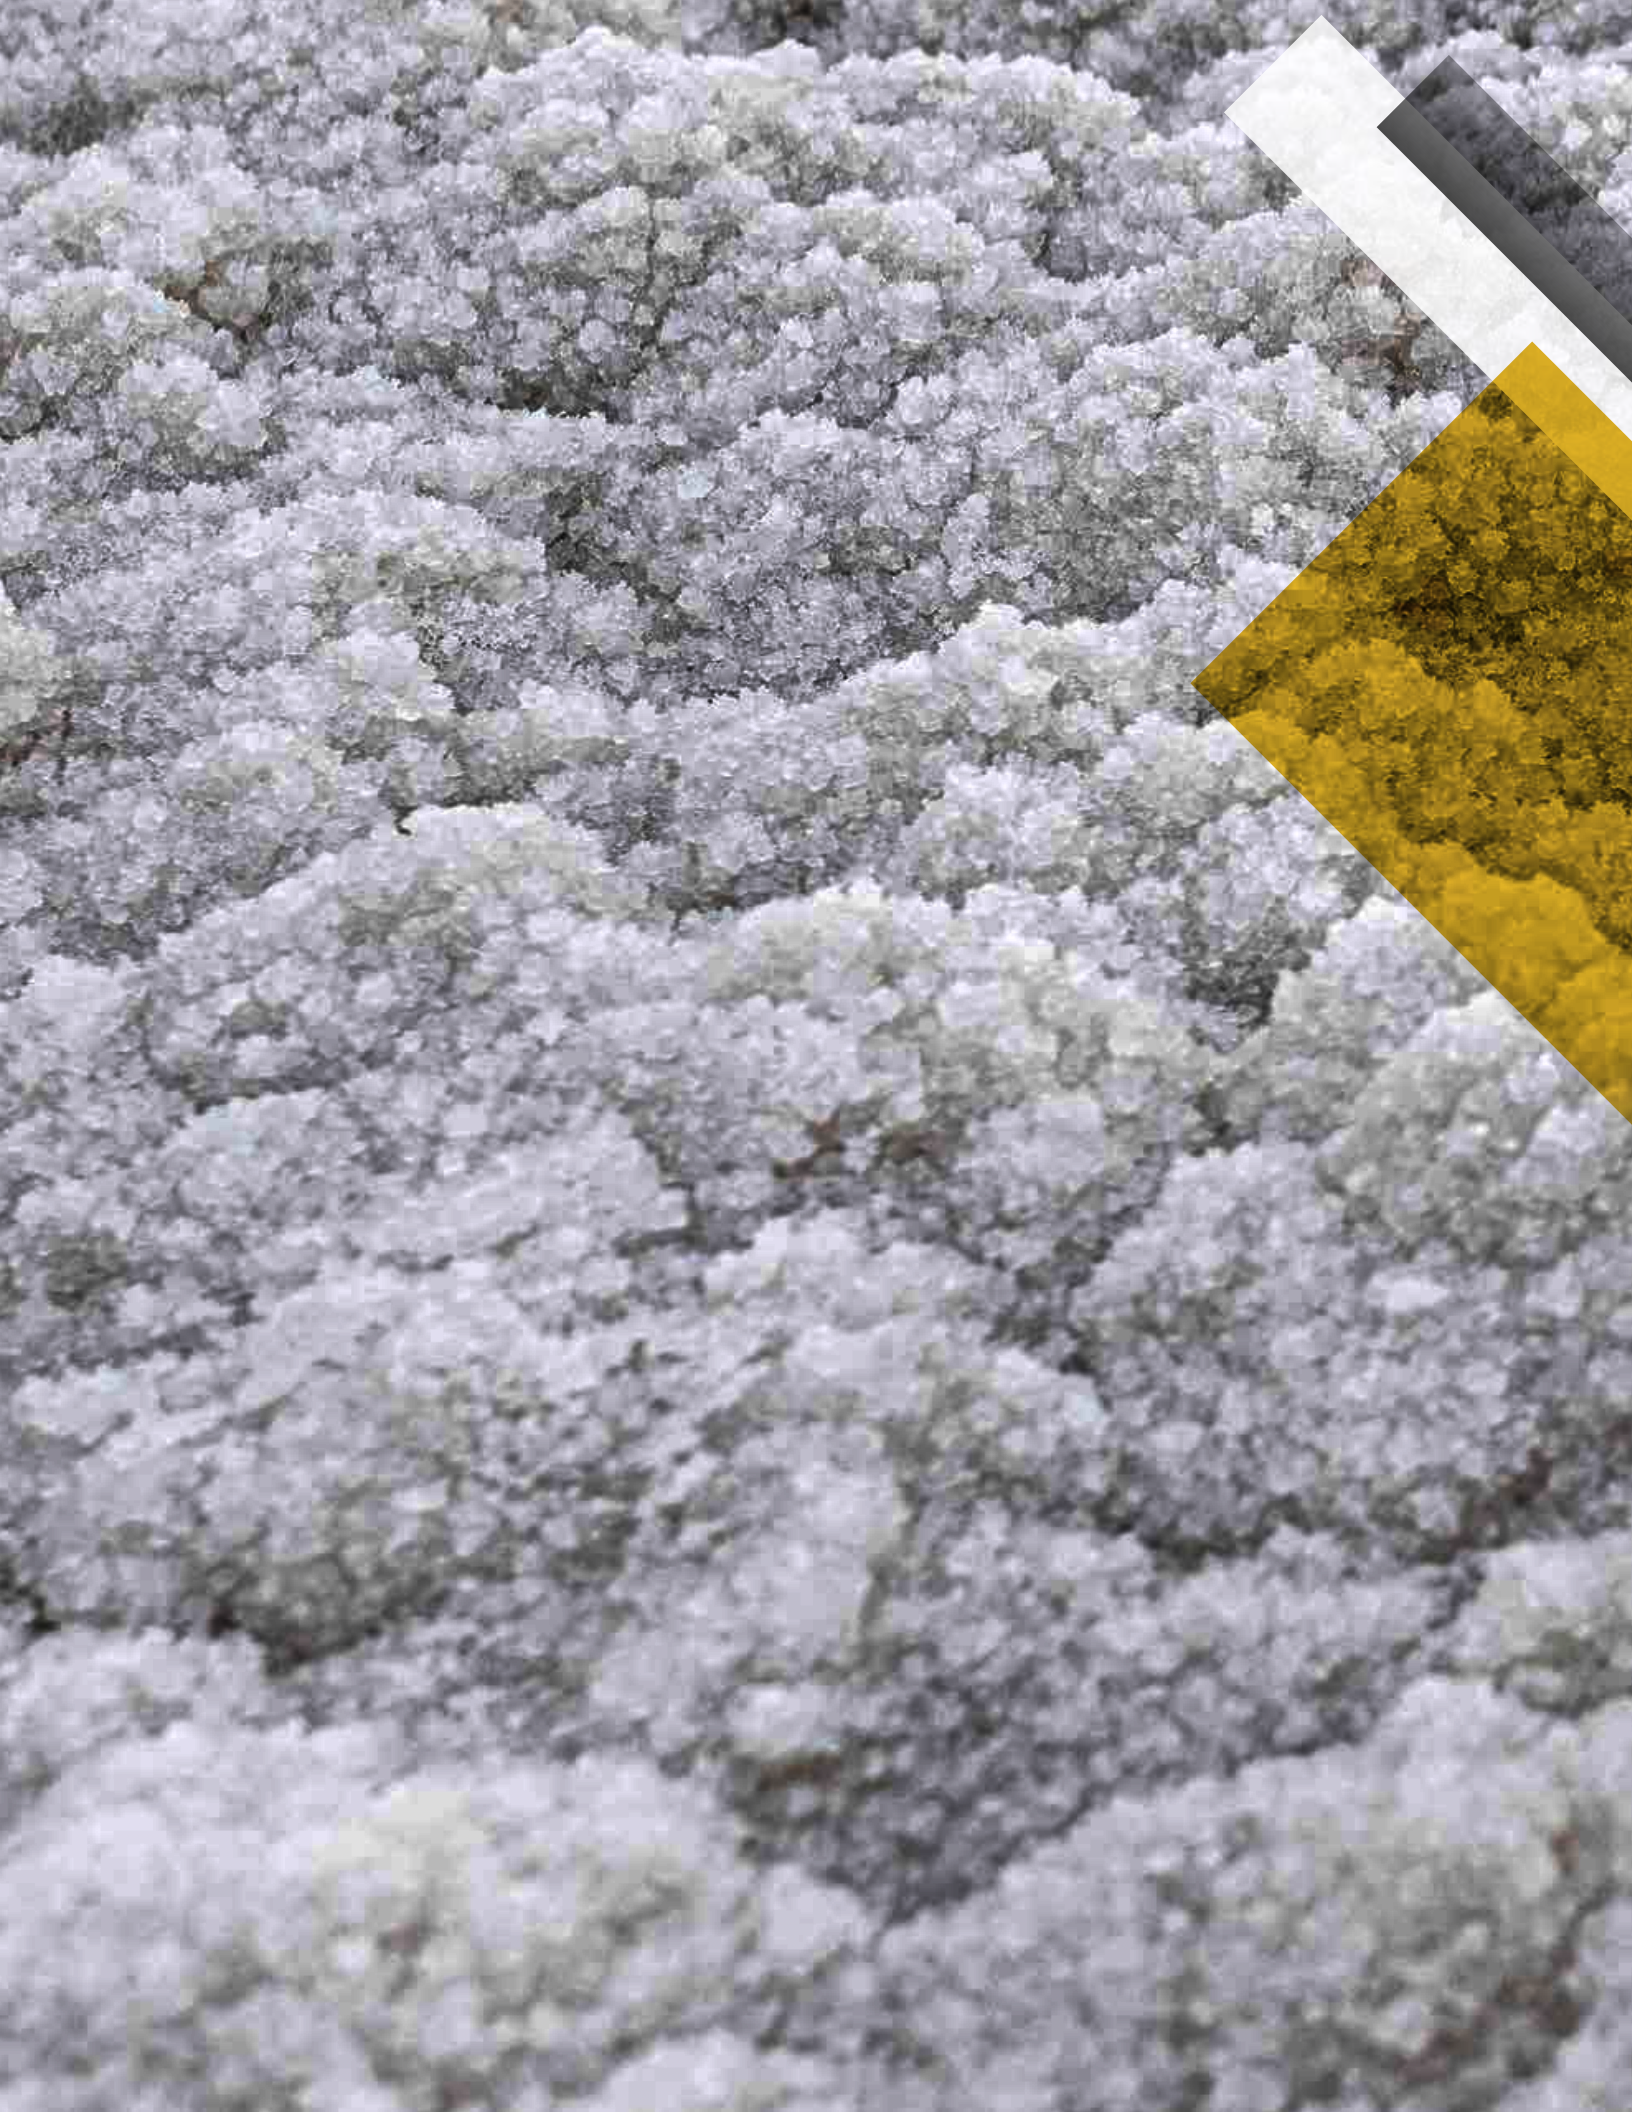

We offer a wide range of bulk, lithium intermediates and specialty metals of different origin to various traders and users worldwide.

Lithium Salts of America (LITH) is primary in lithium salts - involved with the supply chain all the way from the hard rock mining of lithium bearing ores such as spodumene and lepidolite to the down stream chemistries.

We specialize in importing and exporting bulk lithium salts - hydroxides, carbonates and sulfates as well as experts in manufacturing of intermediates with leading positions in, nitrates, acetates, chlorides, fluoride, bromide and silicates, as well as specialty compounds such as de-icer technologies and hybrid nano-polymer emulsions.

“It’s essential to have a experienced partner that actively secures production of lithium materials and compounds, working closely with companies pioneering the brine production routes and new resources, as well as access to downstream products and formulated technologies.”

We have more than half a century of lithium expertise and are leaders in the industry. Known globally for innovation through our research and development of lithium materials.

Our ever-expanding pool of worldwide resources translates into all-around better sourcing lithium salts, more competitive pricing and more efficient logistics.

The group's team is made up of veterans in the lithium business and have worked for some of the largest international producers with expertise in supply channels, technical product development, and primary end-user markets. Working side-by-side with our customers, we develop value-added, customized solutions that make our customers more competitive.

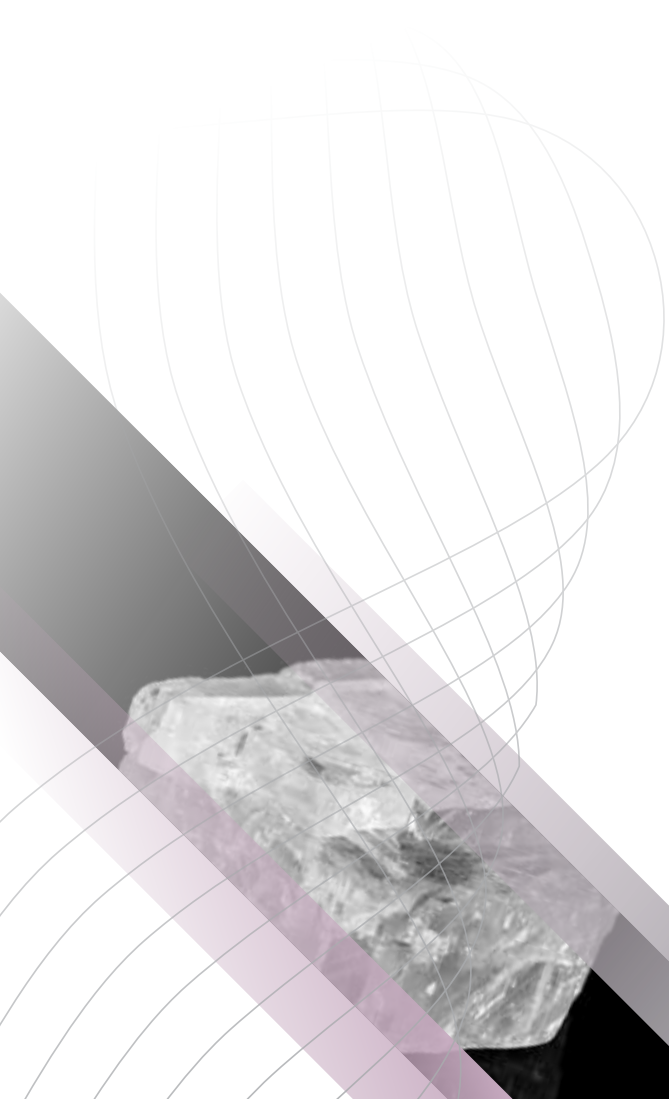

“Know how and manufacturing of lithium chemicals”

“Access to production of spodumene concentrate to secured allocations of primary salts to the manufacturing of downstream products”

“Deep insight and understanding of lithium conversion processes and plants to strategic relationships which provide secure allocations and supply”

“Offer trans-loading, processing and packaging solutions with our various terminals and packaging facilities.”

“Great network within the lithium industry both here and abroad.”

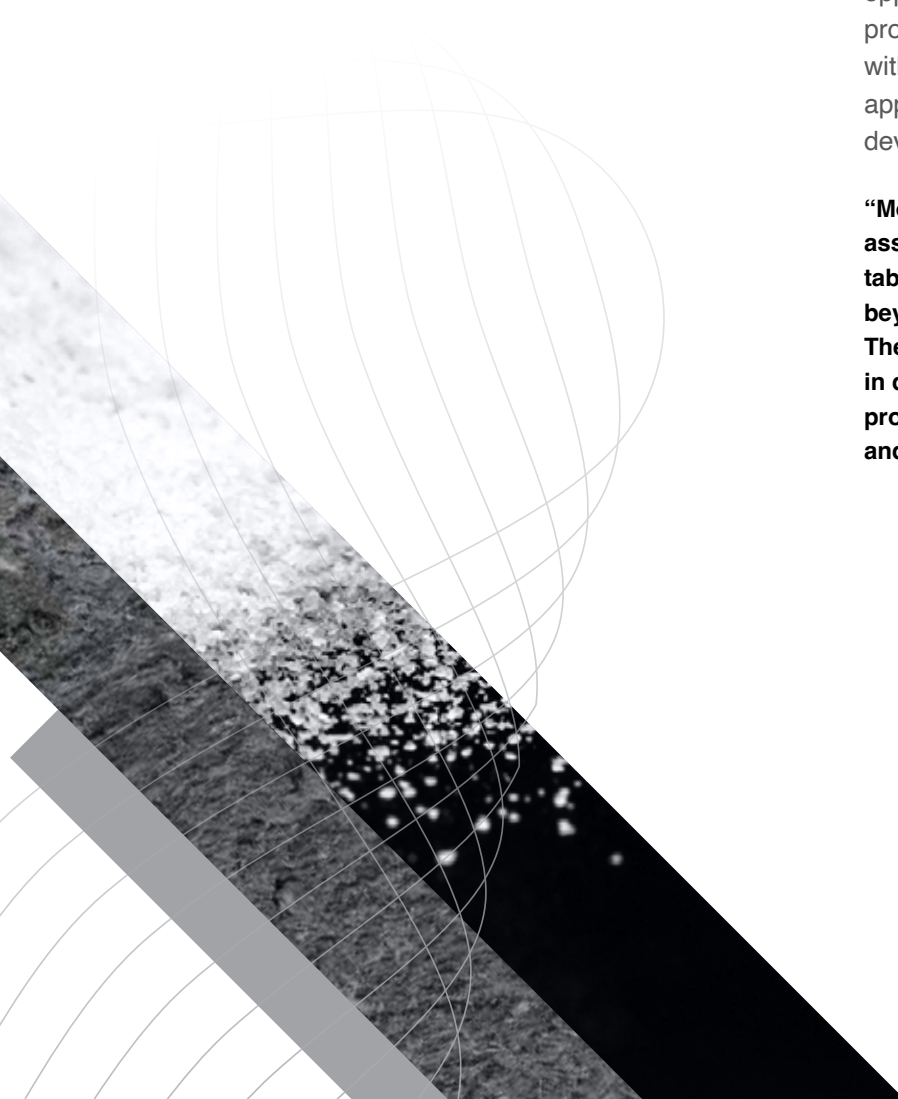

**Advancing the lithium industry with
product development, ventures,
and innovations.**

We have a history of developing customized solutions and work as advocates for innovation by developing joint projects between our suppliers and customers to meet the challenges and demands of today's markets.

Our team is constantly working with formulated technologies partners identifying new product opportunities, intellectual properties, and specialty end-user applications for lithium salts, catalysts and intermediates. Many times this collaborative spirit brings companies together with joint ventures, strategic supply alliances, and / or market development relationships to fast track business opportunities together. As a special service, we provide technical support and process assistance with the development of new products and new applications, optimizing product qualities, process development and product attributes.

"Most recently, our experienced team have been assertive in bringing new business ideas to the table, with an eye on providing value that goes far beyond the typical functions of a trading company. These ideas include alliances between companies in different fields, the planning of new products and production methods in tandem with our clients and partners."

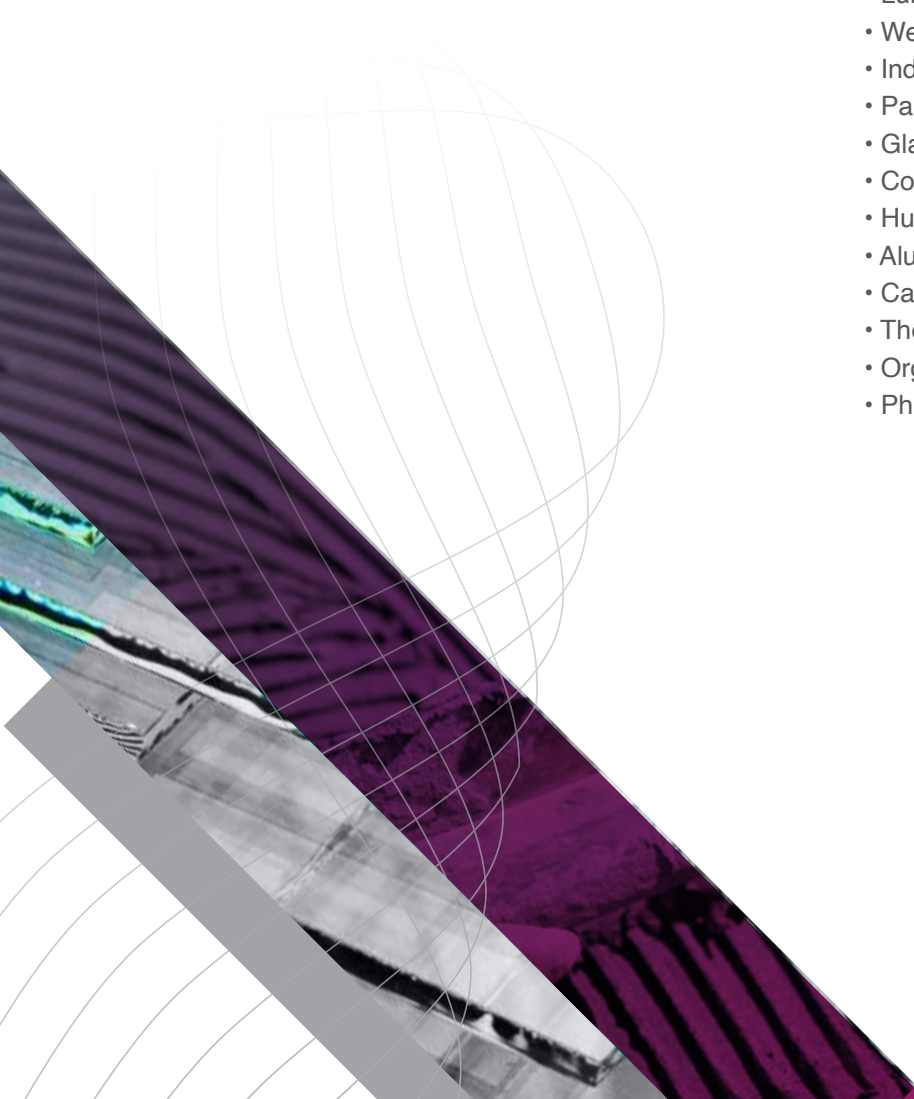

Our products are key raw materials and ingredients used in the production of polymers, catalysts, admixtures, coolants, coatings to name just a few of applications.

A wide range of special lithium salts, specialty materials and intermediates are available in different qualities and packaging units, meeting the varied requirements of various users in the building construction, grease & lubricants all the way to the pharmaceutical industry and the manufacturing of aluminum. From agrochemicals, air treatment, ceramics and glass, dyes, metallurgy to semiconductors, we're a trusted partner that helps customers create a diverse range of critical applications made possible with lithium and its many performance benefits.

- Lubricating Greases
- Welding and Brazing
- Industrial Catalysts
- Paints and Coatings
- Glass, Ceramics and Enamel
- Construction Industry & Cementitious Materials
- Humidity Control & Air-conditioning
- Aluminum manufacturing
- Carbon Dioxide Absorption, Rubber Industry
- Thermal Heat Storage
- Organic Synthesis
- Pharmaceuticals

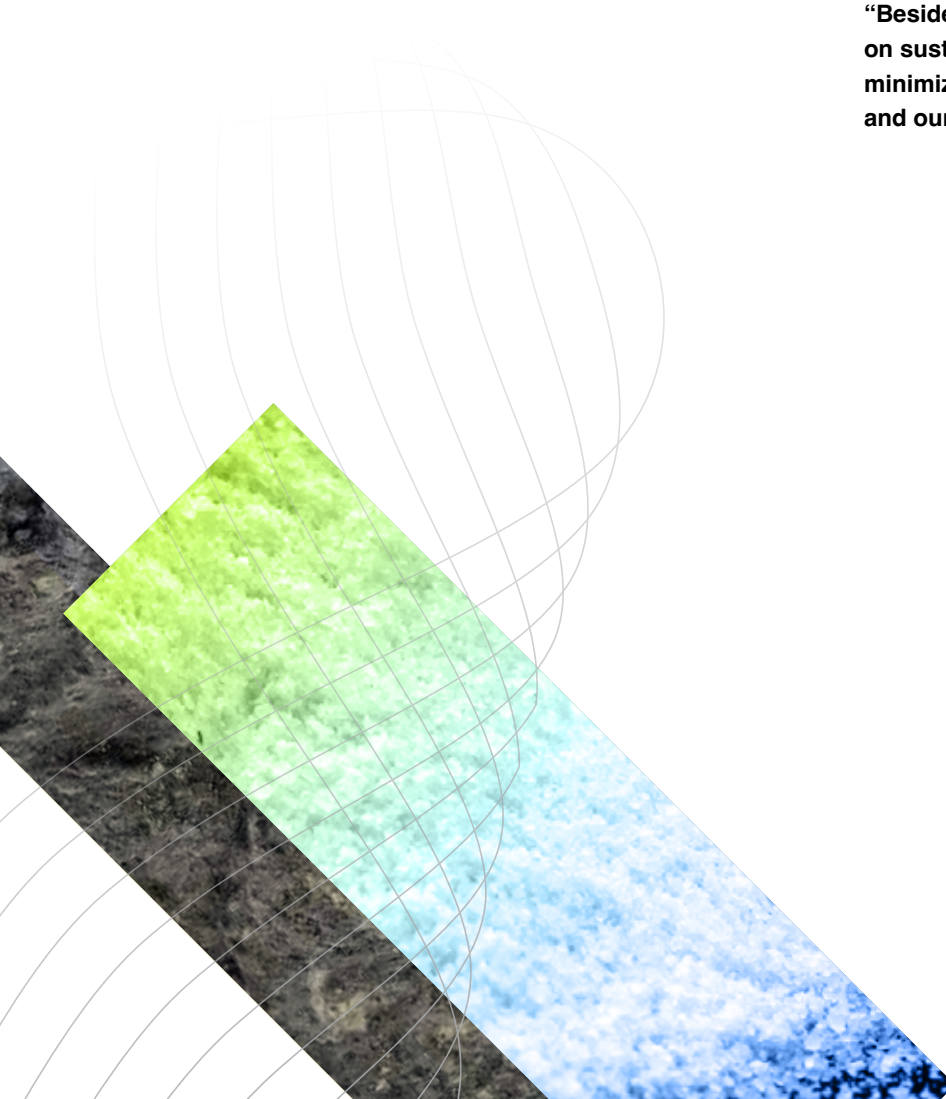

Our promise and ability to deliver, always.

Since 1996 our principals have provided flexible supply and sourcing options for lithium globally and our team strives – each and every day – to provide real value and unmatched expertise that guide our customers toward solutions that enhance performance and quality, reduce costs, and ensure a competitive edge in the markets they serve. We've built stronger customer relationships by playing an active role providing in-depth logistical support, technical expertise, packaging consultation and safety and technical training. Tap into our top tier talent and experience the built-in value that keeps our clients as committed to us as we are to them.

“Besides quality and reliability, we focus on sustainable products and processes to minimize the carbon footprint for our customers and ourselves.”

Keep informed of the latest news, product availability, specifications and information pertaining to R&D papers and technical insights and so much more.
